Custom Class & Method

Header File

Public Methods and Properties Declared Here

class name(type)   subclass

```objc
@interface NewViewController : UIViewController
```

return type   method and Argument name   argument   method and Argument name   argument

```objc
-(void) newMethodsWithArgument:(int) argumentNum andArgument:(NSString *) argumentName;
```

argument type   argument type

```objc
@end
```

Implementation File

```objc
@interface NewViewController ()
@end
```

private methods and properties go here

```objc
@implementation NewViewController
```

return type   method and Argument name   argument   method and Argument name   argument

```objc
-(void) newMethodsWithArgument:(int)argumentNum andArgument:(NSString *)argumentName {

    // do something here

}
@end
```

argument type   argument type
